

## Box 7.2.4b: Paired cloze

### Version B

Exploring new places is exciting and challenging, but it can also be extremely dangerous. It can even result in death.

The American pilot, Amelia Earhart, for example, disappeared in \_\_\_\_ [year]. Earhart was trying to fly around the world from west to east. She took off from Oakland, California, in a two-seater plane, and flew across the \_\_\_\_\_ [ocean], Africa, Arabia and south-east Asia. After arriving in New Guinea, she set off for an island in the mid-Pacific nearly \_\_\_\_\_ [number] km away, and was never seen or heard of again.

Another disappearance happened in Himalaya in Nepal in \_\_\_\_\_ [year]. Two British climbers, George Mallory and \_\_\_\_\_ [first name] Irvine, reached a point about 300 metres from the top of Mount Qomolangma, the highest mountain in the world, and then disappeared. Other climbers reached the top of Qomolangma in \_\_\_\_\_ [year], but no trace was ever found of Mallory and Irvine<sup>1</sup>.

There were also disappearances in the 19th century. For example, in 1845, two British ships, the *Erebus* and the *Terror*, left \_\_\_\_\_ [place] to explore the area \_\_\_\_\_ [location]. The ships, which had a total crew of 120 men, were commanded by \_\_\_\_\_ [name], one of the most famous explorers of the time. They were last seen by another ship near the coast of Greenland, and then they vanished. In 1851, \_\_\_\_\_ [things] were seen on a huge floating island of ice. Then, in 1857, a search party found a message under \_\_\_\_\_ [things] on an island north of Canada. It said that 105 of the men might still be alive.

<sup>1</sup> Since this text was written, George Mallory's body has been found.
